Bull Trout *Salvelinus confluentus* male in spawning colors

Even though they are called a trout, bull trout are actually a char, closely related to lake trout and brook trout rather than rainbow or cutthroat trout

Bull trout have different life histories that can vary by individual population. Some spend their entire lives in small streams and their size remains small. Some migrate from small streams to larger rivers and back again to the stream to spawn. Those fish are generally larger.

- | Basins | | Bull Trout Use Type | |
|--------|--------------------------|---------------------|-----------------------|
| | Allen Cr. | | Migration only |
| | Ebey Slough | | Rearing and migration |
| | West Fork Quilceda Cr. | | |
| | Edgecomb Cr. | | |
| | Middle Fork Quilceda Cr. | | |
| | Quilceda Cr. | | |
| | Sunnyside Cr. | | |
