Type S Stream. Those streams, within their ordinary high water mark, as inventoried as shorelines of the state.

Type F Stream. Those stream segments within the ordinary high water mark that are not Type S streams, and which are demonstrated or provisionally presumed to be used by salmonid fish.

Type Np Stream. Those stream segments within the ordinary high water mark that are perennial and are not Type S or Type F streams.

Type Ns Stream. Those stream segments within the ordinary high water mark that are not Type S, Type F, or Type Np streams. These include seasonal streams in which surface flow is not present for at least some portion of a year of normal rainfall that are not located downstream from any Type Np stream segment.
